Tire Reserve Load

This table lists the tire size designations recommended by the manufacturer for use on the vehicles to which it applies, with the recommended inflation pressure for maximum loading and the tire reserve load percentage for each of the tires listed. The tire reserve load percentage indicated is met exceeded by each vehicle to which the table applies.

Tire reserve load percentage (1)		9.1	2.1	1.
maximum loaded vehicle weight.	Rear	32	28	19
Recommended cold inflation pressure for	Front	28	28	
size designations		X14	X15	
Recommended tire		F70	E60	

(1) the difference, expressed as a percentage of tire load rating, between (a) the load rating of a tire at the vehicle manufacturer's recommended inflation pressure at the maximum loaded vehicle weight and (b) the load imposed upon the tire by the vehicle at that condition.

This chart is not to be used as a guide for selecting replacement tires. For replacement tire size recommendations consult your Owner's Manual. This car was equipped at the factory with the tire size indicated by

Warning:

Failure to maintain the recommended tire inflation pressure or to increase tire pressure as recommended when operating at maximum loaded vehicle weight or loading the vehicle beyond the capacities specified on the tip placard affixed to the vehicle, may result in unsafe operating conditions due to premature tire failure, unfavorable handling characteristics, and excessive tire wear. The tire reserve load percentage is a measure of tire capacity, not vehicle capacity. Loading beyond the specified vehicle capacity may result in failure of other vehicle components.
